1 Overview of Kisê

Kisê allows you to save timesheet.

The application window has five parts: a menu, a toolbar, the timesheet entry, the list of entries and an information area.

For now, the menu is disabled.

The toolbar has ten buttons, they allow:

- to connect to a database;
- to duplicate, add or delete a timesheet entry;
- to print;
- to go to the first, the previous, the next, the last record;
- to open preferences.

The fields are reference, date, who, for whom, what, duration (in hours), to be charged and description. The combos (who, for whom and what) are dynamic, they reflect the contents of the database but it is possible to copy what we want.

The list of entries has two parts, the filter criteria and the list.

With the filter criteria, it's possible to filter entries in one or more conditions, according to several operators.

The selection of a row of the list shows the detail in the timesheet entry.

Finally, the information area gives the total time (in hours and days), the charged times, the selected record and the number of records (in accordance with the filter).

When an error occurs, a messsage will appear at the bottom right.

1.1 Filter criteria

To filter entries, type a few letters in a topic in the filter criteria.

2 Using Kisê

blabla

3 Printing dialog

The printing dialog is very powerfull. You can choose to print in a pdf file or with a printer.

You can define many templates. A template organises how and what to print the entries. To create a new template, clic the + button and change the name in the combo. To delete a template, clic the - button; an alert asks you to confirm the delete.

You choose to print only the selected entry or all entries (= all filtered entries).

Then, you choose items to print, group and sort.

When you check the group box of an item, the print box is also check. The item moves to the top

When you clear a print box with group box

Expliquer les notions de filtre, de groupement (grouper = titre imprim \tilde{A} ©)
